How to improve material handling safety and productivity

Supplier: Optimum Handling Solutions | By: Arthur Chan | 18 March, 2012

In Australia, workplace injuries and related illnesses cost the economy \$57.5 billion dollars a year - a huge number that accounts for almost six per cent of GDP.

Workplace injuries are of course, nothing new, and there are OHS laws that help prevent workplace injuries and minimise its impact on productivity.

Workplace injuries are a particular concern for companies that deal with manual or material handling since this can mean staff are often exposed to safety issues during the transportation of such goods.

Optimum Handling Solutions and Advance Trolleys are both companies that target organisations where such concerns are an issue. They provide equipment that can help reduce or eliminate safety risks associated with manual material handling.

Nathan Horsfall, Director of Optimum Handling Solutions and Advance Trolleys, says that often, safety issues associated with manual material handling can be eliminated through use of modern equipment.

"The mission of these two companies is to provide quality apparatus that make carrying around products, goods and material a much easier and safer activity," Horsfall said.

"The added bonus is not only improved safety, but also improved productivity since staff

Case Study

Custom made acoustic enclosures solve noisy pump challenge

Supplier: Flexshield 10 November, 2016

Noise Induced Hearing Loss (NIHL) is one of Australia's biggest workplace risks.

Hundreds of thousands of Australian's face the risk of Noise Induced Hearing Loss (NIHL) every day.

The government has stipulated certain legislation regarding noise levels, however many companies are unaware of these requirements and therefore place their staff at risk.

Science shows that any noise level above 85dB(A) can cause hearing loss. Even this maximum level can only be safely endured for a maximum of eight hours.

Nearly every industrial-based company has noisy machinery. This means that, unless this issue is properly treated, the staff members at nearly every company are likely to get some degree of NIHL.

NIHL is an incurable condition which adversely affects people's quality of life.
